Kind attention: Mr. S. Mukherjee, AGM(sales)

Sub: Magnetic water conditioners for interstage coolers

Sir,

You might be aware that we had procured one Magnetic water conditioner during May 1996, which was installed at the captive power plant at Bokaro Steel Plant. After six months of operation the interstage cooler was removed due to minor leaks and was inspected. We had observed that the cooler was free from scaling and the old deposits were removed.

Thanking you,

Yours sincerely,

(Dr. K.Ravi)

PRM.

Excerpts and conclusions from Project "Study on behaviours of the Magnetizer water conditioner. Interstage Cooler of Turbo Compressors on Power Plant at Bokaro Steel Plant. :

- " 1) The Magnetic treatment of the cooling water is effective in eliminating the formation of hard scale deposits and also in removing the existing scale.
- 2) Installation of the Magnetizers is very useful for prevention and elimination of the existing deposits of the cooling tubes."
